

For Product and Cart Automation

1. Failed Test: Remove product from cart
2. Reason for Failure: The cart badge was not getting removed after clicking the remove button because the locator used for the remove action was not specific.
3. How I Investigated: Reviewed the Playwright HTML report and analysed the execution using Playwright Trace Viewer.
4. Tool Used: Playwright HTML report, Playwright Trace Viewer
5. Fix Applied: Used a product-specific remove button locator (`[data-test = "remove-sauce-labs-backpack"]`) and added assertions to verify that the cart badge was updated after the remove action.
6. Learning: Locators should be unique and product specific
